PLANITHERM®
Clearly the most energy efficient window glass

Making your home more energy efficient

Over a quarter of all domestic heat loss escapes through windows and doors. In these days of spiralling energy bills this can add up to a lot of **wasted money**.

When it comes to windows, many homeowners focus on the frame style and security features, assuming that all double glazing is equally energy efficient. In fact, there are huge differences in performance and, perhaps surprisingly, it is the **glass** that is the most important element in optimising the **energy efficiency** of your windows.

...insist on
Planitherm

Your local PLANITHERM installer is:

Energy Window	
XZZ Window Company Energy Saving Window	
	A
Energy Index (kWh/m²/year) Energy Index (kWh/m²/year) is a measure of the energy consumption of a window. The lower the value, the better the energy efficiency of the window.	
+10	
UK	
The climate zone is:	
Thermal Transmittance (U _{frame})	1.4 W/m²·K
Solar Factor (g _{frame})	0.47
Effective Air Leakage (I _{frame})	0.00 m³/m²·K
Reg. No. Sample	www.xzz.org
The label is a key element in the energy efficiency of a window. It is a key element in the energy efficiency of a window.	

PLANITHERM is the most energy efficient window glass available and the best possible choice for energy savings.

Insist on **PLANITHERM** for a lighter, brighter, warmer home and lower energy bills.

Sit back and enjoy the savings!
